

SECOND GRADE EXPLORES THE CONCEPT OF TIME

This week in 2nd grade, our students embarked on an exciting journey to explore the concept of time and how it passes. We used hands-on activities with clocks to practice measuring elapsed time and connected our lessons to real-life events, making the abstract idea of time more tangible and meaningful.

One of the highlights of our lesson came when Evan shared her thoughts about the challenge of learning time: "It's easy, but sometimes it's hard." Her words were a perfect reminder that learning something new requires both effort and patience, and it's okay to find it difficult at times. It's all part of the process!

Another standout moment came when Bradley correctly answered a tricky question: "What time does the new day begin—12 AM or 12 PM?" With confidence, he responded, "12 AM!" His attention to detail and understanding of time concepts impressed us all.

The students had a blast using their own clocks to solve time-related problems, and it was truly heartwarming to see their excitement and growing confidence. Watching them tackle these challenges with enthusiasm has been such a joy, and it's been wonderful to witness their curiosity about how time works continue to grow.

It's exciting to see how our 2nd graders are mastering important life skills, and we look forward to seeing more of their discoveries as they continue learning and growing in this area. Time flies when you're having fun—especially in 2nd grade!
